

# 4G LTE Cellular Backup System

## 4G LTE Cellular Backup

Maintain business continuity and data connectivity with automatic failover to 4G LTE. Let's face it, outages occur and an internet or data failure could stop any business in its tracks.

Wireless WAN failover using 4G LTE can automatically provide the non-stop connectivity access you need to conduct business efficiently and cost-effectively when your primary internet goes down for any reason.

## Benefits To Your Business:

- Protection from Risks of Lost Revenue
- Employee Productivity
- VoIP Phone System Connectivity
- Costs of a Secondary WAN

## Always Stay Connected:

Modern businesses and organizations need connectivity at all times of day, and part of that is having a good back-up plan to keep things running smoothly if your primary network falls victim to ISP problems or equipment failures. We offer an easy, affordable cellular backup internet connection that will keep your business running seamlessly during outages.

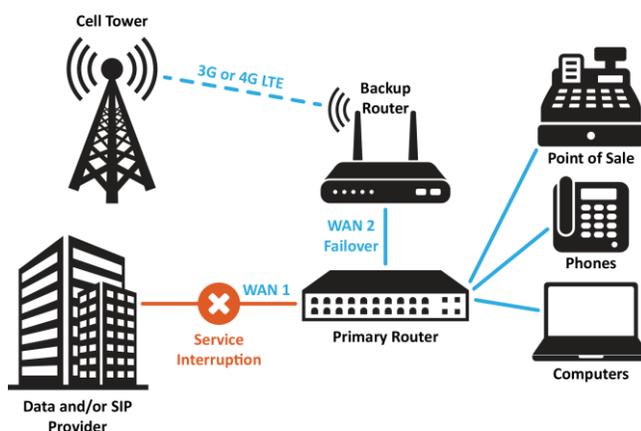

Each 4G LTE router automatically switches on whenever your primary connection goes down, ensuring your employee computers, IP phones, and credit card terminals stay online.

In the event of a hurricane or natural disaster often times cell towers remain in service providing continuous connectivity while landlines such as Cable or DSL are out of service.

## Example 4G LTE Backup Design

ACTUAL DESIGNS MAY DIFFER BASED ON ACCOUNT NEEDS AND SITUATION

## How Does Cellular Failover Work?

### Automatic Failover in the Event of Interruption

In the event of a service interruption of the primary internet connection, the router will automatically switch over to the cellular network.

This solution can be easily deployed in existing networks, new network turn-ups, or rapidly deployed for mobile business locations like pop-up stores or construction sites. Solutions may vary a bit depending on your needs but the basic idea is shown in the example design.

We could limit the cellular connection to only your most critical devices if needed.

***Most importantly, you get the peace of mind knowing that an internet outage won't derail your business and that you are "always on".***
